Managing Colors

Current Color

Background Color

Design Colors (Active Colors)

- List of colors currently being used in the design
- Changing Colors
 - Right-click > edit color to change color of that swatch
 - Click and drag a swatch from the Palette to Design Colors
- Right-click > Show/Hide (others/all)
- Locked colors allow colors to remain in the active colors even when they are not currently in use.

Color Palette

- A small selection of available colors.
- Right-click > Edit Color to change the color of that swatch

Color Level in the Project View

- Right-click on the color group > Color... to change thread color
OR
- Select the color group, click on the desired color from either the active colors or the color palette.

Element Level

- Color information is stored at the element level.
- Changing the color of an element
 - Select the element(s) > click on the desired color swatch
OR
 - Select the element(s) > Right-click > Color...
 - The elements change color while all other elements remain
